Search Title: Models of improving health outcomes for the homeless

Search carried out by: Anne Gray, Knowledge Officer
Commissioning.librarian@miltonkeynes.nhs.uk

Date of search: 14 April 2012, update 29 May 2012

Databases searched: HMIC, BNI, SCIE, Cochrane Library,

Other resources used: IDeA, DH, Joseph Rowntree Foundation,

Time taken: 3 days

Summary of topic:
This broad ranging and rapid review brings together descriptions of services designed to improve health outcomes for people who are homeless, and evidence to support the different approaches. The report includes UK case studies, reviews of the evidence and resources/toolkits describing models to improve health outcomes for homeless people. No attempt has been made to evaluate the case studies. Reviews from peer reviewed journals and resources from key players in the field have been included.

This report has not tried to bring together broader initiatives where health improvement for the homeless is only a small part of the initiative.

Publications 2005 to date.

Summary of findings:
Case studies and descriptions of UK health services for people who are homeless people (refs 1-19),
Reviews and appraised evidence around the effectiveness of those services (ref 20-36)
Policies, toolkits and guidelines to support establishment of such services (37-52).

No further attempt has been made to collate findings of these reports.

4. London Pathway model - Promoting compassionate healthcare for homeless people
Health Foundation, [not dated]
This project seeks to bring greater compassion and skill to homeless healthcare, improving homeless peoples’ experience of care and changing how hospital staff view homeless people.

5. Supporting homeless people with advanced liver disease approaching the end of life (St Mungo's Palliative Care Project, 2009)
This report presents the findings of a detailed review of the case notes held by St Mungo’s for people affected by advanced liver failure who died between January 2009 and April 2010. Focus group discussions with staff from St Mungo’s were held to explore their experiences of the deaths of residents. The research aimed to identify changes in the general condition or behaviour of homeless people with advanced liver disease that might indicate their health was deteriorating and they could soon be facing death.

6. Project London: helping vulnerable people to access healthcare
A snapshot of the users of ‘Project London's' clinic for vulnerable groups in East London and examines who they are, their health needs and their experience in trying to access medical care

Project: London: supporting vulnerable populations.
McColl, Karen, Pickworth, Sarah, Raymond, Isabelle
BMJ, 2006, vol./is. 331/7533(115-117), 0959-8138
Abstract: Some people in the UK find it difficult to access health care. People with chaotic lifestyles, such as those living on the streets, have difficulty fitting in with the way mainstream health services are organised. People who have not grown up with the NHS do not easily understand how to enter it or how to use the health system. Tougher restrictions on entitlement to NHS care introduced in April 2004 are another barrier to health care for migrants. Project: London will help people to access the services that they are entitled to and will speak out for vulnerable people who are unable to access the medical care they need. 13 refs. [Summary]

13. Integrated treatment for homeless clients with dual disorders: A quasi-experimental evaluation
Morse, Gary et al
Journal of Dual Diagnosis, 2008, vol./is. 4/3, 1550-4263
Abstract: The purpose of this study was to compare the effectiveness of four interventions in providing services to homeless clients with dual disorders: standard care (SC), assertive community treatment only (ACTO), integrated assertive community treatment (IACt), and new integrated assertive community treatment (NIACT). Participants had to be homeless, have a substance use disorder, and have a severe mental illness to be eligible for the study. One hundred and ninety-six individuals were randomly assigned to SC, ACTO, or IACt. Approximately two years later, 85 participants were assigned to NIACT. A quasi-experimental design was employed to analyse the data. Clients in the NIACT program had better outcomes on consumer satisfaction than clients in the other conditions. Clients in NIACT, IACt, and ACTO groups had better housing outcomes than clients in SC. Clients in NIACT reduced their use of drugs more than clients in the other programs, but there was no difference between conditions on the other substance abuse variables. There was no difference between conditions on psychiatric symptoms. IACt may need to be augmented with other services to reduce substance use and produce better psychiatric outcomes for dual-disorder homeless individuals. Cites numerous references. [Journal abstract]

14. Homelessness: a way forward for nurses
Tansley, Kate
Primary Health Care, 2008, vol./is. 18/1, 0264-5033

18. **Front Door Wolverhampton overarching service pathway.**
Findlay, Jon, Weiner, Chris, Williams, Hilary  
Journal of Integrated Care Pathways, 2006, vol./is. 10/1(41-46), 1473-2297  
**Abstract:** Front Door Wolverhampton is a pilot project for people who are homeless or vulnerable, and it developed out of the Community Asset Feasibility study (CAFs). CAFs was commissioned by the Wolverhampton Neighbourhood Renewal Board and completed by the Wolverhampton Policy and Research Institute. The overarching recommendation of CAFs was that it was now important to join up homeless and allied services and to devise smarter ways for services to work together. The intention being to ensure higher quality services for homeless and vulnerable groups. Front Door Wolverhampton has taken up this challenge and developed integrated care/service pathways as one way to meet these objectives. The use of integrated care/service pathways in a non-health-care setting is to the project's knowledge, unique. 1 fig. + 1 appendix [Introduction]

19. **The role of the public health nurse in meeting the primary health care needs of single homeless people: a case study report.**
Poulton, B, McKenna, H, Keeney, S  
Primary Health Care Research & Development, April 2006, vol./is. 7/2(135-46), 1463-4236 (2006 Apr)  
Research in Northern Ireland analysing the findings of an innovation to improve the health of homeless people, involving a community nurse practitioner carrying out a needs assessment in an inner city area, coordinating multidisciplinary services for this client group and facilitating access. The nurse's job description, roles and required skills are discussed and illustrated with patient case studies. 31 refs.

21. Effectiveness of interventions to improve the health and housing status of homeless people: a rapid systematic review.

BMC Public Health 2011, 2011, vol./is. 11/638, 1471-2458
Fitzpatrick-Lewis, Donna, Ganann, Rebecca, Krishnaratne, Shari

Abstract: BACKGROUND: Research on interventions to positively impact health and housing status of people who are homeless has received substantially increased attention over the past 5 years. This rapid review examines recent evidence regarding interventions that have been shown to improve the health of homeless people, with particular focus on the effect of these interventions on housing status.

METHODS: A total of 1,546 articles were identified by a structured search of five electronic databases, a hand search of grey literature and relevant journals, and contact with experts. Two reviewers independently screened the first 10 per cent of titles and abstracts for relevance. Inter-rater reliability was high and as a result only one reviewer screened the remaining titles and abstracts. Articles were included if they were published between January 2004 and December 2009 (see systematic review by Hwang for earlier studies – below) and examined the effectiveness of an intervention to improve the health or healthcare utilization of people who were homeless, marginally housed, or at risk of homelessness. Two reviewers independently scored all relevant articles for quality.

RESULTS: Eighty-four relevant studies were identified; none were of strong quality while ten were rated of moderate quality. For homeless people with mental illness, provision of housing upon hospital discharge was effective in improving sustained housing. For homeless people with substance abuse issues or concurrent disorders, provision of housing was associated with decreased substance use, relapses from periods of substance abstinence, and health services utilization, and increased housing tenure. Abstinent dependent housing was more effective in supporting housing status, substance abstinence, and improved psychiatric outcomes than non-abstinence dependent housing or no housing. Provision of housing also improved health outcomes among homeless populations with HIV. Health promotion programs can decrease risk behaviours among homeless populations.

CONCLUSIONS: These studies provide important new evidence regarding interventions to improve health, housing status, and access to healthcare for homeless populations. The additional studies included in this current review provide further support for earlier evidence which found that coordinated treatment programs for homeless persons with concurrent mental illness and substance misuse issues usually result in better health and access to healthcare than usual care. This review also provides a synthesis of existing evidence regarding interventions that specifically support homeless populations with HIV. [Abstract]

Full Text: http://ukpmc.ac.uk/articles/PMC3171371 or pdf http://ukpmc.ac.uk/articles/PMC3171371/pdf/1471-2458-11-638.pdf

Notes: The conclusions above were based on the ten studies rated of higher quality. (Table 1). The remaining 74 studies considered to be moderate quality are included in the references (refs 12-81) and shown in Additional file 2 under the following headings:

- Homeless people with mental illness
- Homeless people with substance abuse
- Homeless people with concurrent mental illness and substance abuse
- Homeless people with Tuberculosis, HIV, Hepatitis or other chronic illness
- Homeless or runaway youth
- Homeless women, families or children
- Homeless, miscellaneous

This review updates an earlier systematic review:

Interventions to improve the health of the homeless: a systematic review.
Hwang SW, Tolomiczenko G, Kouyoumdjian FG, Garner RE.
BACKGROUND:
Homelessness is a widespread problem in the United States. The primary goal of this systematic review is to provide guidance in the development and organization of programs to improve the health of homeless people.

METHODS:
MEDLINE, CINAHL, HealthStar, PsycINFO, Sociological Abstracts, and Social Services Abstracts databases were searched from their inception through July 2004 using the following terms: homeless, homeless persons, and homelessness. References of key articles were also searched. 4564 abstracts were screened, and 258 articles underwent full review. Seventy-three studies conducted from 1988 to 2004 met inclusion criteria (use of an intervention, use of a comparison group, and the reporting of health-related outcomes). Two authors independently abstracted data from studies and assigned quality ratings using explicit criteria.

RESULTS:
Forty-five studies were rated good or fair quality. For homeless people with mental illness, case management linked to other services was effective in improving psychiatric symptoms, and assertive case management was effective in decreasing psychiatric hospitalizations and increasing outpatient contacts. For homeless people with substance abuse problems, case management resulted in greater decreases in substance use than did usual care. For homeless people with latent tuberculosis, monetary incentives improved adherence rates. Although a number of studies comparing an intervention to usual care were positive, studies comparing two interventions frequently found no significant difference in outcomes.

CONCLUSIONS:
Coordinated treatment programs for homeless adults with mental illness or substance abuse usually result in better health outcomes than usual care. Health care for homeless people should be provided through such programs whenever possible. Research is lacking on interventions for youths, families, and conditions other than mental illness or substance abuse.

Crisis, Dec 2011

**Notes:** The average age of death of a homeless person is 47 years old and even lower for homeless women at just 43, compared to 77 for the general population. Drug and alcohol abuse are particularly common causes of death amongst the homeless population, accounting for just over a third of all deaths. Homeless people are over nine times more likely to commit suicide than the general population. Deaths as a result of traffic accidents are three times as likely, infections twice as likely and falls over three times as likely. Being homeless is incredibly difficult both physically and mentally and has significant impacts on people’s health and well being. Ultimately, homelessness kills.

26. Homelessness and mental health: adding clinical mental health interventions to existing social ones can greatly enhance positive outcomes
Cockersell, Peter
Journal of Public Mental Health, 2011, vol./is. 10/2, 1475-9535

This paper seeks to discuss the association between homelessness and poor health, both physical and mental. A pilot project run by St Mungo's suggests that adding clinical mental health interventions, notably psychotherapy, makes existing social care interventions several times more effective, enables deeper recovery, and frees people to move on across all the domains of their lives. St Mungo's was awarded a grant by the Cabinet Office as one of the national pilots working with 'adults facing chronic exclusion' (jointly funded by the Department of Work & Pensions, Ministry of Justice, Department of Health, Department of Communities, and Department of Families and Children - because these clients impact on the remits of all these departments). The aim of the project was essentially simple: to test the hypothesis that, if chronically excluded adults were excluded because of their psychological disorders, then could a psychotherapeutic intervention reduce their exclusion? Recently, 274 people have attended for therapy; 30% of these are women, 70% men, with 68% white and 32% black. In total, 30% did not come to the initial assessment session, and there are many reasons for this, for example, people abandoning or being evicted from their accommodation, death, imprisonment and resettlement. Some were also referred without proper consultation, so that when they were contacted it turned out they did not want psychotherapy or, in a few cases were already accessing it elsewhere. Of those who did attend assessment, 80% went on to attend four or more sessions; most clients attended either two to four sessions, or more than 12. Attendance overall was 76%, and non-attendances were noted on 11% of occasions. Many homeless people become caught in the 'revolving door' of hostels, prison, hospitals, and the streets, often for many years. This paper argues that this form of homelessness affects people because of their mental health, and that social solutions alone are not sufficient, which is why the door continues to revolve. Offering appropriate clinical interventions alongside existing social ones could begin to transform this situation. Cites numerous references.

27. A Review of Single Homelessness in the UK 2000-2010
Anwen Jones and Nicholas Pleace, Crisis and Centre for Housing Policy, 2010
Chapter 6. Single homelessness and health (p67-76)
6.1 Introduction
6.2 The effects of single homelessness on health
6.3 Improving the health of single homeless people
6.3.1 Barriers to health care for single homeless people
6.3.2 Debates about specialist and mainstream health service provision
6.3.3 Key policy and service provision developments from 2000-2010
6.4 Conclusion

This paper presents the results of analysis aimed at better understanding the health needs and relative healthcare costs of people who are homeless or living in certain types of insecure or short-term accommodation…Different models for provision of primary care services to this client group are discussed and the barriers experienced in accessing mainstream primary care are set out. Four models of care are described, ranging from outreach services to a fully integrated primary and secondary care model.

29. A long way from home: mental distress and long-term homelessness - a Good Practice Briefing, Shelter 2008
The prevalence of mental health needs among those experiencing homelessness and the difficulties they face when attempting to access mainstream mental health services are well documented. Shelter’s research shows that people with mental health problems are at a greater risk of experiencing long-term, damaging homelessness. This continues to occur despite recent changes in policy and the introduction of high-profile reports and practice guidelines.

30. Health and homelessness : a whole-systems perspective.
Housing Care and Support, 2008, vol./is. 11/1(7-10), 1460-8790
Read, Sue
People who are homeless often have multiple, complex health needs. Health services need to be adapted to ensure that they receive appropriate care in a cost-effective way, and that this is done in partnership with other agencies so that their needs are met in a holistic and productive manner. This can be achieved by modifying existing care pathways, by provision of specialist services or both. Any local solution will depend on the number of people who are homeless and their needs. The undertaking of joint strategic needs assessments offers an opportunity to influence commissioners to ensure that the needs of people who are homeless are included in future care and support developments. 8 refs. 31. How can health services effectively meet the health needs of homeless people?
Wright, Nat M. J., Tompkins, Charlotte N. E.
British Journal of General Practice, 2006, vol./is. 56/525(286-293)
Abstract: BACKGROUND: Homelessness affects many people in contemporary society with consequences for individuals and the wider community. Homeless people experience poorer levels of general physical and mental health than the general population and there is a substantial international evidence base which documents multiple morbidity. Despite this, they often have problems in obtaining suitable health care. AIM: To critically examine the international literature pertaining to the health care of homeless people and discuss the effectiveness of treatment interventions. DESIGN OF STUDY: Review and synthesis of current evidence. METHOD: Medline (1966-2003), EMBASE (1980-2003), PsycINFO (1985-2003), CINAHL (1982-2003), Web of Science (1981-2003) and the Cochrane Library (Evidence Based Health) databases were reviewed using key terms relating to homelessness, intervention studies, drug misuse, alcohol misuse and mental health. The review was not limited to publications in English. It included searching the internet using key terms, and grey literature was also accessed through discussion with experts. RESULTS: Internationally, there are differing models and services aimed at providing health care for homeless people. Effective interventions for drug dependence include adequate oral opiate maintenance therapy, hepatitis A, B and tetanus immunisation, safer injecting advice and access to needle exchange programmes. There is emerging evidence for the effectiveness of supervised injecting rooms for homeless injecting drug users and for the peer distribution of take home naloxone in reducing drug-related deaths. There is some evidence that assertive outreach programmes for those with mental ill health, supportive programmes to aid those with motivation to address alcohol dependence and informal programmes to promote sexual health can lead to lasting health gain. CONCLUSIONS: As multiple morbidity is common among homeless people, accessible and available primary health care is a pre-requisite for effective health interventions. This requires addressing barriers to provision and multi-agency working so that homeless people can access the full range of health and social care services. There are examples of best practice in the treatment and retention of homeless people in health and social care and such models can inform future provision. 105 refs. [Abstract]

32. Developing homelessness prevention practice: combining research evidence and professional knowledge.
Crane, M, Warnes, A, Fu, R
Health & Social Care in the Community, March 2006, vol./is. 14/2(156-66), 0966-0410 (2006 Mar)
3 recommendations for developing homelessness prevention, arising from research into pathways into homelessness in newly homeless people. The principles of homelessness prevention and recent policy initiatives are reviewed. Issues specific to older homeless people are discussed. 50 refs.

33. No place to call a home: exploring the health inequalities for homeless mothers and their families.
Wood, G
MIDIRS Midwifery Digest, June 2006, vol./is. 16/2(151-6), 0961-5555 (2006 Jun)
Exploration of health implications of homelessness for pregnant women and mothers, including definitions and causes of homelessness and poverty, particular problems faced by ethnic minority women and asylum seekers, illustrated by a case study, and how to meet the health and social care needs of this client group. A brief literature review on homeless women's health related problems is included. 62 refs.

34. Developing homelessness prevention practice: combining research evidence and professional knowledge.
Crane, Maureen
Health and Social Care in the Community, 2006, vol./is. 14/2(156-166), 0966-0410
Abstract: This paper presents recommendations of three kinds for the development of homelessness prevention: for practice changes, for the concerted development of evidence on the effectiveness of different measures, and for a more systematic approach to the identification and dissemination of good practice. The recommendations were developed through consultation with health-care, social service and housing provider staff. They were asked to comment on the results of a study of 131 newly homeless people, which showed that there were five prevalent 'packages of reasons' that created distinctive 'pathways' into homelessness and concluded that some cases were preventable. This article outlines the principles of homelessness prevention and recent British policy initiatives in the field, summarises the research methodology and relevant findings, and describes the consultation. The final section discusses the discrepancy between the high priority that homelessness prevention currently receives and the primitiveness of both the evidence base and the arrangements for good practice dissemination. 2 tables 50 refs. 35. S.O.S. Sick of Suffering: St Mungo's report into the health problems of homeless people, St Mungo's 2006 (8pp)
Key figures from the Health research showed that
• 1 in 2 of those with a physical health problem that is related to sleeping rough are not receiving treatment.
• Over 1 in 3 (38%) of those with respiratory problems are not receiving treatment
• 1 in 3 homeless people with a cardiovascular problem are not receiving treatment

36. Sick and Tired - The Impact of Temporary Accommodation on the Health of Homeless Families
Shelter, December 2004
This report looks at the health impact of living in temporary accommodation.

Working practices/tools/guidance

37. Mental health and homelessness: Planning and delivering mental health services for homeless people
NHS Confederation, 2012
This Briefing sets out the policy context around tackling homelessness and addressing the mental health needs of homeless people. It also examines what considerations need to be made when planning, designing and delivering mental health services for homeless people and highlights examples of good practice. Extensive bibliography.

38. Improving the health of the poorest, fastest': including single homeless people in your JSNA
St Mungos, Dec 2011
This briefing outlines why addressing the needs of single homeless people should be a core feature of JSNAs so that local authorities can achieve their goal of reducing health inequalities.
39. Tackling homelessness and exclusion: Understanding complex lives
Joseph Rowntree Foundation, 2011
This paper summarises findings from four projects examining the interaction between homelessness and other support needs and looks at services for people with complex needs and suggests ways that policy and practice can more effectively tackle homelessness

40. Interagency working to support the health of people who are homeless
Joly, Louise, Goodman, Claire, Foggatt, Katherine, Drennan, Vari
Social Policy and Society, 2011, vol./is./4, 1474464
Abstract: Interagency working is a recurrent theme in homelessness policy literature, but is ill defined and rarely addressed in UK homelessness research. This article draws on findings from a study that explored how interagency working is achieved between statutory and voluntary sector services concerned with improving the health of people experiencing homelessness. The authors argue that a focus on the health needs and behaviours perceived as being a risk to the general population directly influences interagency working and how professional networks organise themselves. The findings are discussed with reference to the impact of social policy on the health of people who are homeless. Cites numerous references. [Journal abstract]

41. Care Coordination Model: Better Care at Lower Cost for People with Multiple Health and Social Needs.
This white paper outlines methods and opportunities to better coordinate care for people with multiple health and social needs, and reviews ways that organizations have allocated resources to better meet the range of needs in this population. There is special emphasis on the experience of care coordination with populations of people experiencing homelessness
http://www.ihi.org/knowledge/Pages/IHIWhitePapers/IHICareCoordinationModelWhitePaper.aspx

42. End of life care: Achieving quality in hostels and for homeless people - a route to success
National End of Life Care Programme, 2010
A practical guide to implementing high quality end of life care for homeless people in our communities

43. Meeting the psychological and emotional needs of homeless people; Non-statutory guidance on dealing with complex psychological and emotional needs
National Mental Health Development Unit and the Department for Communities and Local Government, 2010
Includes many examples of existing services and research

44. Healthcare for Single Homeless People, DH, 2010
This paper presents the results of analysis aimed at better understanding the health needs and relative healthcare costs of people who are homeless or living in certain types of insecure or short-term accommodation
“This report on health and homelessness in Central Bedfordshire seeks to provide an accurate
representation of information from the agencies above and in so doing create a joint vision for the
ongoing development of health services which meets the complex needs of homeless people in
Bedfordshire.”

46. Hospital admission and discharge: People who are homeless or living in temporary or
insecure accommodation, DH 2006
This publication relates to guidance to support hospitals, Primary Care Trusts (PCTs), local authorities
and the voluntary sector, working in partnership, to develop an effective admission and discharge
protocol for people who are not living in settled accommodation. The overarching aim of the protocol
will be to ensure that no one is discharged to the streets or inappropriate accommodation.

47. Access to mainstream public services for homeless people (literature review)
Crisis & CESI 2005
This report reviews and summarises existing evidence on the extent to which homeless people are able
to access mainstream services, and how well public services are performing for homeless people

48. Healthy hostels: A guide to promoting health and well-being among homeless people
Hinton, T, Evans, N & Jacobs, K. October 2005
The first guide to comprehensively explore health promotion work with homeless people this report
sets out to answer questions such as: How can housing, resettlement and health workers promote the
health and well-being of homeless people? and what are the most effective ways of working and what
resources do they need?

49. Achieving Positive Shared Outcomes in Health and Homelessness
Homelessness and Housing Support Directorate with the Department of Health's Health Inequalities
Unit, 2004
This guidance, based on analysis of good practice, data and research, sets out the health issues and
health inequalities faced by homeless people and those vulnerable to homelessness, and relates these
to existing statutory and non-statutory targets.
http://www.communities.gov.uk/archived/publications/housing/achievingpositiveshared

50. Multi-agency assessment panels toolkit (Shelter)
This best practice manual contains the practical information you need to set up a panel, including
FAQs and trouble-shooting guides, good practice examples, and sample forms and checklists. (July
2004)
Download the MAAP toolkit
Guidelines to accompany the MAAP toolkit are also available to download

51. Guide to models of delivering health services to homeless people
Crisis, 2003
A practical document to be used by primary care trusts, local authorities and voluntary organisations when
planning health services for homeless people.
